Simulation Training for Law Enforcement

A NEW WAY OF THINKING ABOUT SIMULATION TRAINING.

When it comes to effective training, frequency is key. But in order to be used frequently, training must be readily accessible. This is a concept that seems to elude most training simulator companies.

To be truly accessible, training must be priced so that a department can afford to implement it. It must be small enough to work in any space, and it must be easy enough for anyone to set up and use. Take away any of these, and you're left with training that won't be used as often as it needs to.

DART is different because it supports the development of a wide variety of critical skill sets while directly addressing the need for portability, affordability, and ease of use. In short, DART makes frequent and effective law enforcement training a reality.

After all, what good is the world's best training if you can't get it into the hands of the people that need it?

■ Portable

It stands to reason that training that requires an officer to leave the building won't be used as often as training located within the building. DART turns virtually any space into a training center – eliminating one of the largest barriers to frequent training.

■ Affordable

To be truly accessible, simulation training must fit within a department's budget. A complete DART system costs less than \$10,000, while a well-equipped system with all the bells and whistles is still under \$15,000.

■ Easy to Use

Powerful features are meaningless if the system is too difficult to learn and use. That's why we designed DART to be incredibly easy to set up and use - even for a single officer.

By combining advanced 3D graphics with video, DART extends your ability to create courses and scenarios beyond what typical simulators can do. You'll find some skills are best practiced using a single stationary silhouette, while others require a decision-making scenario with multiple moving subjects – all possible with DART.

■ DART Range (standard)

DART Range is used to practice decision-making, marksmanship, and critical firearm and tactical skills in a wide variety of realistic digital environments. Use pre-made courseware or create your own using DART Creator or DART Studio.

■ DART Creator (standard)

DART Creator allows you to develop and customize your own qualification-type courses to meet your department's specific training objectives.

■ DART Trace (optional training weapon reqd)

Track the movement of a pistol or rifle during all phases of a shot. Once a shot is made, the shooter's aim point can be replayed in real-time, which can be used to analyze shooting performance.

■ DART Studio (optional)

DART Studio extends the capabilities of your DART system by allowing you to create an expanded variety of courses, decision-making scenarios, and training with characters, props, and video that go well beyond range and qualification courses.

- Fits within the budget of virtually all departments
- Simple operation is easy to learn and use
- Supports frequent and consistent training
- Reduces the overall cost of training and qualification
- Compact design can be set up anywhere
- Exceptional versatility for a wide range of training
- Develop and share courseware with other departments
- Free software updates for life
